

ESTLAB is composed by a team of researchers working at Department of Engineering of Roma Tre University (Rome, Italy) in the field of electronics and electrical science. We design **customized software and devices suitable for research laboratories or industrial companies**. Our products are in the field of photovoltaic panels, energy harvesting, magnetic devices, microcontrollers, sensors. All our products and projects are provided together with a wide scientific literature.

Numerical simulations by using High Performance Computing (HPC)

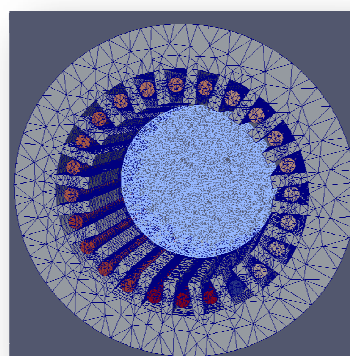

Applications for smart phones and tablets as standalone software or graphic interfaces for wireless controlled devices

Sensors for different and several applications

Software designing for finite element methods (FEM) applications
